(a)								
2.1.1	<p>Prepaid Meters</p> <p>The practical implementation of the Inclining Block Tariffs (IBT) for prepaid meters is based on the number of units purchased during a calendar month. Any purchases made during the calendar month will be calculated by the vending system in accordance with the IBT rates. If the consumer purchases more than once in a month, the previous purchases will be taken into account when the rate for the additional units is determined. Due to the inclining rates, it will not be beneficial for a consumer to purchase much more than the required monthly consumption. At the end of the month, the system resets and the first purchases in the next month is at the Block 1 rate. If a consumer does not purchase any units in a full calendar month/s, this will not affect the rates of the next purchase in a calendar month thereafter. Consumers will be responsible for all costs relating to the conversion from conventional to prepayment metering.</p>

2.1.2 Conventional meters												
(a)	For the purposes of the implementation of the IBT for the conventional meters, the billing period on which the IBT charges will be applied, means the period between successive monthly meter readings (normally between 25 and 36 days), irrespective of whether such readings are taken on the last day of the calendar month. Estimated charges are raised during months during which no meter readings can be taken, which is normally based on the previous month's consumption.											
2.1.2.1 1 Phase												
(a)	The existing consumers with 80A and 100A single phase circuit breaker sizes are being phased-out in line with NERSA's requirements. Their Basic Charge will be increased annually up to eventually the same value as that of a 60A three phase circuit breaker. It will therefore be advantageous for these consumers to either convert a 60A single phase supply or a 30A or 45A three phase supply, if possible.

(a)	This tariff is for shops, office buildings, hotels, including accommodation establishments with four or more bedrooms, single residential properties utilised for business purposes, clubs (excl. sport clubs), industrial undertakings, temporary supplies, or similar premises with circuit breaker sizes not in excess of 60Amp single phase or 100Amp three phase. Should Consumers have supplies in excess hereof, the Bulk Supply tariff will be applicable.							
2.2.1	Prepaid Meters							
(a)	The total Service Charge payable at each transaction is calculated using the number of days between the previous and present purchases. Consumers will therefore find that they do not receive the same amount of kWh for the same rand value if the number of days between purchases varies.

(a)	The Bulk Supply tariff is for Consumers with a notified maximum demand of 60kVA or more or who require a supply greater than a 100Amp three phase circuit breaker size. The Notified Maximum Demand (NMD) is the maximum demand notified in writing by the Consumer and accepted by the Municipality.											
2.3.1	Normal Bulk

2.3.2	Time of Use (TOU)											
	The TOU tariff is for Consumers with a minimum notified demand of 60kVA or who require a supply greater than 100A three phase circuit breaker size, and who are able to manage their energy consumption according to Eskom's specified time schedule, i.e. Peak, Standard and Off-Peak for the "Megaflex" tariff. The TOU tariff will only be available to residential developments with a bulk supply after 60% of the erven inside the development have been built on and occupation of the houses have been taken. This tariff is based on the Eskom "Megaflex" tariff, except that there is a single Basic Charge and Eskom's various kWh charges are included in one Energy Charge. The Network Demand Charge is payable per month for the demand supplied (maximum demand reading) during peak and standard periods. No Network Demand Charge is payable during off-peak periods. The Network Access Charge is payable per month based on the highest of either the notified maximum demand (min. 60kVA) or the highest maximum demand reading during the previous 12 months. The charge is applicable during all time periods. The Reactive Energy Charge is applied to kVAh in excess of 30% (0,96 Power Factor) of kWh recorded during peak and standard periods. The excess reactive energy is determined per 30 minute integrating period and accumulated for the month and will only be applicable during high-demand season. The difference between the Low and High Voltage charges is 5% and in line with Eskom tariffs. The following conditions are applicable to the TOU tariff: (i) Consumers with a minimum notified demand of 60kVa, and who are able to manage their energy consumption according to Eskom's specified time schedule, i.e. Peak, Standard and Off-Peak, for "Megaflex" tariff. (ii) Consumers must have the necessary electronic metering equipment installed and correctly programmed for this tariff at their cost. (iii) Where existing Consumers consider conversion to TOU, it will be the consumers' responsibility to do a tariff study. (iv) At least 6 months TOU data (3 x high demand season and 3 x low demand season) must be available before the conversion can be implemented. (v) A change of tariff will apply for a minimum period of 12 months with three months mutual notice thereafter.
